

**Uluro™ makes
e-delivery a reality
for essentially any
print and mail service
provider.**

E-DELIVERY & ARCHIVE

Transformations

Transforming Technology Into Solutions

With **Uluro™**, each end user can control how they want to communicate in order to maximize response rates and ensure all data is delivered in the most appropriate — or most preferred — way. You can meet your clients' demands for secure access and additional services without the need for costly and extensive custom programming or administrator intervention. Together, these options let you streamline your entire billing and revenue capture process to remove the human element and eliminate costly errors, while providing a full range of true multi-channel delivery choices.

To learn more how **Uluro's** OnceAmination® can revolutionize how you do business, visit our web site at **www.uluro.com**.

E-DELIVERY AND ARCHIVE SOLUTIONS

Electronic Document Presentment:

Electronic delivery of bills, statements and other high-value documents is gradually becoming the standard and all but expected by many consumers. But this complex process is fraught with pitfalls for the unwary biller or service bureau. With **Uluro™**, you can use the latest technology in electronic presentment to drastically reduce your production costs by eliminating the need for consumables, expensive equipment, and postage. Uluro allows you to:

- Electronically present your statements securely via rights-based security.
- Render documents with accurate underlays identical to what would have been printed.
- Securely populate a Web page on demand with either the actual data or generated documents creating a document image (PNG) or PDF.

Uluro lets you enter the world of e-presentment as an expert, using advanced security and a solution that can enable PCI (Payment Card Industry) compliance.

Email Delivery and Presentment:

Uluro's Secure Email Presentment and Payment (SMPP) solution offers an alternative to "push" e-bill delivery and settlement model. This brandable out-of-the-box interface can be customized for your company or clients in a matter of minutes. Uluro has built in print suppression to help drive e-delivery for your

clients and/or their customers in such popular formats as:

- HTML-based email with a link to website.
- HTML-based email with an attached PDF version of the mail piece.
- Email with a token-based link to automatically retrieve a PDF or HTML page.
- eStatement Verify
- E-Delivery of information to your client.
- Presentment via secure native PNG format.

Secure Archiving:

Customers and clients also expect round-the-clock online access to statements, bills and other documents. Whether documents are archived for e-presentment, customer service, self-service or account retention, Uluro provides a way to exceed your client's requirements by providing secure on-the-fly creation of mail pieces for presentment and viewing:

- Web-based searching GUI that can quickly locate a specific transaction or mail piece and enable viewing as a PNG in HTML or PDF.
- Ultra secure PNG presentation to provide faster presentment and viewing within a zero footprint environment.
- Options for storing PDF's for presentment and archive if on-the-fly creation is not desired.
- API supported single sign-on should your clients wish to maintain their individual corporate look and feel through their website.

Additional Features:

- Preference management Email/Print/Web
- Integrated multi-factor authentication
- Online enrolment & account monitoring
- Reporting & Disclaimer acceptance
- Cookie creation and access support
- Lost password feature
- Email address & account validation
- Secure tablet and mobile supported viewing
